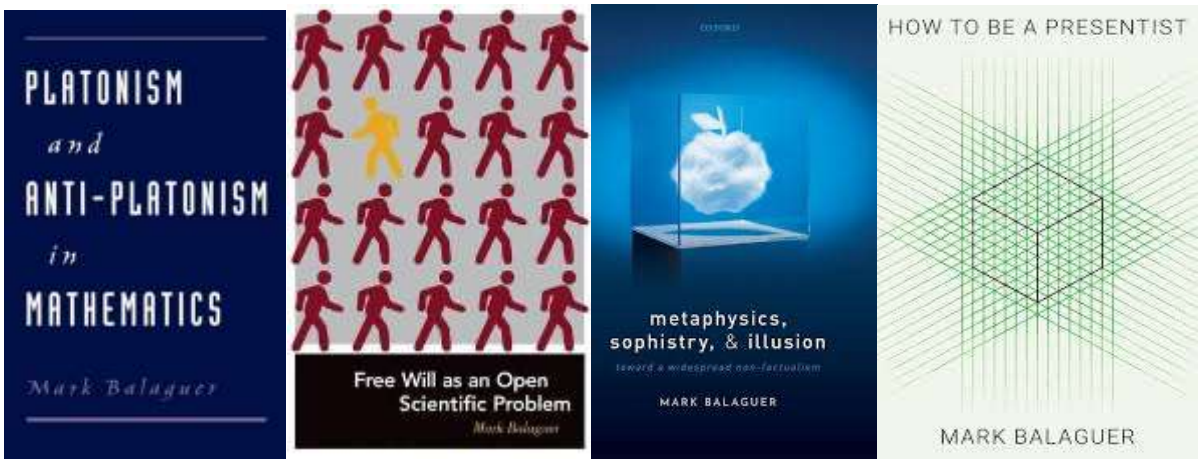
What is Neo-Positivism and How Could We Argue For It?

Petak, 23.10.2026. 12.15, F-138
Filozofski fakultet u Rijeci, Sveučilišna avenija 4

Prof. Balaguer will articulate and explain how to justify a neo-positivist view that entails that metaphysical questions (and, indeed, most philosophical questions) decompose into (a) logical questions, (b) empirical questions about physical reality, and (c) non-factual questions. More specifically, I will explain how we can decompose metaphysical questions into the controversial questions at their core, and I will explain how to argue that all of these controversial questions are either very difficult empirical questions (questions that could only be answered via science but that we're currently unable to answer scientifically) and questions that are factually empty in the sense that there is no fact of the matter as to their answers.


Profesor Balaguer autor je niza utjecajnih radova iz filozofije:
