MJESEČNO PREDAVANJE

Katarzyna Wiśniewska, PhD
(University of Eastern Finland / University of Rijeka)

Toward a computational framework for cognitive semantic theories
Contrasting Human- and Machine-Generated Translation through a Cognitive Linguistic Lens

Ponedjeljak, 25. studenog 2024. u 12 sati
Predavaonica F-105

Join us for an insightful presentation providing an overview of the progress made in an ongoing research project conducted by a visiting researcher at UNIRI from a YUFE (Young Universities for the Future of Europe) partner university in Finland.

The research focuses on comparing human translators and Large Language Models (LLMs) in handling cognitive semantic information in translation, aiming to explore the applicability of cognitive semantic theories in cognitive psychology and computational frameworks.

Attendees will gain insights into the methodologies used, preliminary findings, and future directions for the project. Learn more about this research initiative and its implications for LLMs used as translation tools.
